P1SSG!RL

In “HELLO YELLO”, P1SSG!RL employs multiple telephone receiver microphones to capture and process live audio, producing recursive loops that evolve into spontaneous remixes. The setup functions as a real-time experiment in signal degradation and feedback, reflecting the instability of digital cognition. The piece examines how brain rot, noise, and censorship emerge as byproducts of iterative data processing. It operates as a study in semantic collapse and the systemic errors inherent in machine learning.
